

**LECTU: UNIVERSITY
ATTENDANCE PLATFORM**

*Manage your whole school
from one single place*

ENSIA Incubator — Demo Day · 2026-05-09

[Founder 1] · [Founder 2] · [Founder 3]

3rd-year ENSIA students

In 90 seconds:

A teacher opens Lectu → Generates a QR code → 90 students check in → A live quiz happens → The teacher walks out with attendance, engagement, and grades — all captured.

This is happening at ENSIA right now.

THE PROBLEM · 03

How Algerian universities run their classrooms today.

WHAT TEACHERS DO TODAY

Pass paper sign-in sheets in 200-person lectures

Track attendance in personal Excel files

Coordinate justifications via WhatsApp

Run live quizzes via Kahoot (paid out of pocket)

Enter grades in Progres at end of semester

WHAT IT COSTS

Lost time, miscounts, fraud

No analytics, no consolidation

No audit trail, no compliance

\$15–25 per teacher / month, not in DZD

No real-time feedback to students

Progres is a registrar. Moodle is a PDF dropbox. Nothing is built for the classroom.

Four features, one platform.

Attendance

QR check-in · Manual mark · Card scan · Geofence verification · Offline mode

Live & Async Quizzes

In-class real-time leaderboard · Scheduled async with auto-grading

Justifications

Students submit with file attachments · Teachers/admin review and approve

Grades & Reports

Per-module tracking · 15-week attendance Excel export · Auto-notify students

Plus: announcements, real-time notifications, calendar integration, role-based dashboards.

In production at ENSIA
since February 2026.

1,480

attendance records

208

distinct students

76

in 1 live quiz

14,677

notifications

31 sessions · 510 device fingerprints · 18 justifications

Pilot module: Machine Learning, 3rd Year

Algerian law made local hosting non-negotiable.

Loi 18-07*June 2018*

Personal data protection. Cross-border transfer requires ANPDP authorization. Penalties up to 5 years imprisonment.

Law 22-39*January 2022*

Public cloud providers must host on Algerian territory under ARPCE authorization.

ANPDP active*August 2022*

Law 11-25 (July 2025) tightens requirements further — mandatory DPO, processing records, DPIA.

Foreign LMS — Google Classroom · Microsoft Teams · Canvas · Schoology — all process Algerian student data outside Algerian jurisdiction.

Lectu is the only platform built compliant by architecture.

Today: Microsoft Azure (Europe) Tomorrow: Algerian-hosted infrastructure.

TODAY

Lectu currently runs on Microsoft Azure (European region) for development velocity. ENSIA's on-campus datacenter is currently saturated, so on-campus hosting wasn't available for the soft launch.

TOMORROW

FastAPI + Postgres + Redis is portable by design. Migration to Algerian-hosted infrastructure is a one-week deployment, gated only on capacity availability.

WHAT WE'RE ASKING FROM ENSIA

Help us secure on-campus hosting capacity, OR an introduction to an Algerian hosting partner (Algérie Telecom Cloud, ICOSnet, AventureCloudz). The technical migration is ready — what we need is the institutional resource.

The Algerian higher-education market.

114

universities + colleges nationally (~1.54M students)

381,428

new bac entrants in 2024 — 97.84% admission rate

11

private HEIs + autonomous-budget grandes écoles

BOTTOM-UP MARKET MATH

1.54M students × ~600 DZD avg = ~900M DZD/yr addressable.
Sidi Abdellah pole alone = ~20,000 students = up to 12M DZD ARR at full pole adoption.

SIDI ABDELLAH POLE — OUR BEACHHEAD

ENSIA ~2,000 students (us, 10% utilization)
NHSM (mathematics) TBD
ESI Algiers (Oued Smar) ~1,340
Pole expansion: 6+ grandes écoles by 2028
Designed for ~20,000 students total
85% smartphone penetration among DZ students

We start with the cohort that already knows us.

What else is out there?

COMPETITOR	WHAT IT DOES	WHAT IT DOESN'T	PRICING (~2,000 STUDENTS)	LECTU WINS ON
Moodle (UMBB, USTHB, M'sila)	Course materials	Documented unused for attendance	Free + IT staff cost	Actual classroom usage
Google Classroom · Teams · Canvas	International features	Not Loi 18-07 compliant; USD-billed	\$60–250k / yr (~8–33M DZD)	Loi 18-07 + DZD pricing
Kahoot · Wooclap · Mentimeter	Live quizzes only	Per-teacher, no attendance, no DZD	~\$30k / yr at institution scale	All-in-one platform

"This service is horrible, it never works, and when it does work, it shows grades for a certain time then stops working." — Apple App Store review of Progres, 2024

Lectu = 1,000,000 DZD / year. 10–30× cheaper than enterprise LMS, and the only DZ-native product that covers attendance + quizzes + grades + LMS.

Per-school annual flat license.

GRANDES ÉCOLES & SMALL UNIVERSITIES

1,000,000 DZD

per year · all-inclusive

< 2,000 students

LARGER UNIVERSITIES

Custom

pricing

> 2,000 students

All features · Unlimited users · Hosted in Algeria · Fr / Ar localization · Onboarding + training

No per-seat fees. No per-feature gating. Annual budget cycle aligned.

Two-year horizon.

Phase 0

Activate all 7 ENSIA modules. Pull all 67 teachers into active use. Migrate to Algerian hosting.

Now → Sept 2026

Phase 1

Sidi Abdellah pole expansion. Target: 3 schools live (ENSIA + 2 pole partners).

Sept 2026 → Sept 2027

Phase 2

Other DZ grandes écoles (Polytechnique, ESAA) + select public universities.

Sept 2027 → Sept 2028

International expansion is explicitly out of scope for 24 months.

Looking ahead — two horizons.

NATIVE MOBILE APPS (iOS + Android)

2026–27 academic year

A native mobile app on both platforms — primary goal: limit cheating attempts in lecture attendance. Hardware-bound device IDs, real-time push, offline-first check-in.

AI & THE FUTURE OF HIGHER EDUCATION

Research-driven · Ongoing

The AI wave is reshaping how students do assignments, how teachers grade, and how universities measure learning. Three open questions:

- How do you grade an assignment when ChatGPT writes a credible draft?
- How do you redesign coursework for AI-native students?
- How do you keep human judgment central without ignoring the tools?

Lectu wants to be the research partner ENSIA uses to figure this out.

What we need from ENSIA.

1. Continuation in the incubator — keep the slot, lab access, mentorship through end of 2026.
2. Formal ENSIA pilot agreement — official deployment for the 2026–27 academic year, multi-department rollout.
3. On-campus hosting capacity — Phase 1 migration to ENSIA datacenter, OR introduction to an Algerian hosting partner.
4. Pole introductions — warm intros to NHSM, ESI Algiers, and other Sidi Abdellah grandes écoles.
5. Design + marketing recruiting — help connect us with ENSIA students for the open team roles.

WHAT'S BLOCKING US

- Hosting depends on capacity
- Multi-teacher activation slow without endorsement
- No formal pilot agreement yet
- No design or marketing capacity

Meet the team.

[Founder 1]

Founder & Full-Stack Lead

3rd-year ENSIA

Backend (FastAPI · Postgres · Redis) + frontend (Next.js · Tailwind) + product.

[Founder 2]

Backend & Infrastructure

3rd-year ENSIA

Async SQLAlchemy · WebSocket real-time · Alembic migrations.

[Founder 3]

Frontend & UX

3rd-year ENSIA

Editorial design system · Attendance grid · Quiz editor · Offline-first sync.

We are hiring · Design lead · Marketing / outreach lead

Thank you.

*Special thanks to Dr. Brahimi Mohamed and the ENSIA incubator program
for ongoing mentorship and guidance.*
